The Story of **Aksay Silah**

Aksay Av Tüfegi Silah Sanayi ve Ticaret Ltd. Sti. was founded in 1991 in Huglu/Beysehir is the district of Konya, Turkey. Besides machinery Technologies and milling strategies, we are one of the first company in shotgun industry specifically spare parts production. Our story was started with manuel milling and lathe machines. Aksay Silah, day by day, were improved machinery line with CNC machines. Today Aksay Silah is continuining their production with brandnew cnc machines and Professional team.

With our 30 years of experience and newest technology investments, we are focusing on high quality porduction and non-stop business flow. Aksay Silah meet, the shotguns industry's need with high quality production and special shotguns. Aksay shotguns fundamentals has not only depends on production technology but also durability, and design.

YS SERIES

AKSAY FIREARMS is one of the first company that focused on shotgun internal parts and main components production as contact manufacturer in industry. Our story is started in 1971 and our LLC company is founded in 1991. During our contact manufacturing services, Aksay Firearms has a chance to work with all gauges, all working systems and all different design and production methods. Day by day with this experience decided to produce single barrel high quality shotguns. These shotguns are designed and produced by completely in our own CNC machines and standardization of parts and all materials are 100% compatible with each others. In our assambling process we are using standart parts for every shotgun.

Standardization and harmonization process gives us a produce combo gauge shotguns beside traditional single barrel shotguns. We are producing single barrel shotguns with affordable prices and highest quality to our partners. Aksay Firearms, exporting the guns over than 5 country for now.

Receiver material is 1040 monoblock steel, barrel material is 4140 drilled method processed and all other parts are milled from block materials. For each Aksay Single Barrel Shotgun we use approximately 9kg. steel and 1 kg alloy. After the all machining and assembling acitivities our final weight is 2.3 kg.

YS series main difference is receiver. Receiver is monoblock steel and it has a bridge on the bottom of the gun. This part directly increase the durability of the gun. When the gun exploded the kinetic wave dividing 3 part and absorbing easily. The first part is main connection pin which is produced from 4140 and hardened to 41 Rockwell, secondly connection of barrel and receiver with the standardization of the gun there are no any gap so the wave absorbing again. Lastly the bridge of the bottom is keep the receiver more rigid and durable to absorbing the power of explosion. In short closed bridge system directly increased our durability rates by 3 times.

All gauges are using same standart parts and monoblock receiver. Monoblock receiver's main difference is internal trigger. Internal trigger is assisting the trigger so it is impossible to make fire without any trigger pulling or smth. This internal trigger makes the trigger more pure and smooth. Thanks to internal trigger the shooting accuays is more sharper. Aksay Firearms makes all the quality controls and tests to all the guns before shipping. Also our 500 rounds non-stop shooting test uploaded on our Youtube Channel.
